EDUCATION

Chaitanaya Bharathi Institute of Technology **Hyderabad**
Bachelor of Engineering - Computer Science and Engineering (AI and ML); GPA: 9.3 December 2021 - May 2025

EXPERIENCE

Software Engineer II: Accellor April 2026 - Present

- Architected the backend data layer and **REST APIs** for an **AI-assisted procurement platform**, designing **70+ PostgreSQL** tables and **17+** API domains on **FastAPI**, serving as the backbone that a multi-agent LLM system built on **Microsoft Agent Framework** reads and writes through.
- Developed the integration and tooling layer connecting the agent architecture to **Oracle Fusion Procurement Cloud** — **SSE**-streamed endpoints for real-time agent responses, an audit pipeline logging every AI interaction, and **Celery**-based async pipelines syncing AI-driven evaluation scoring back into the system of record.
- Integrated **SigNoz** for distributed tracing and observability across the **FastAPI** backend, and managed database schema evolution using **Alembic** across **120+** migrations, enabling safe, backward-compatible changes to production without downtime.

AI Engineer: Techolution October 2025 - March 2026

- Delivered a **"Prompt Mode"** feature for structured prompt generation and drove adoption of **Voice Agents** using **Google Speech-to-Text (STT)**, enabling conversational, voice-based interaction workflows.

Software Developer : 10xR May 2024-September 2025

- Engineered a multilingual **AI Voice Agent** using **LiveKit** with **STT** (Deepgram, Google) and **TTS** (Google, Cartesia), and executed **SIP integration** for real-time inbound/outbound calls — enabling seamless communication in **5+ languages**, improving call latency by **80%**, and supporting **1,000+ daily sessions**.
- Devised a scalable **multi-agent system** with task-specific roles, turn detection, and noise suppression, and incorporated **RAG models** and **MCP servers** for intelligent dialogue management — boosting dialogue accuracy by **35%** in noisy environments and contextual response accuracy to **97%** across **10,000+ interactions**.
- Orchestrated infrastructure on **AWS** using **Terraform**, deploying **20+ microservices** via **EKS/ECS** and reducing deployment time by **60%**, while maintaining **Kubernetes** environments at **99.99% uptime** and using **Amazon DocumentDB** to query millions of records with high availability.

PROJECTS

10xR Voice AI Agent Platform | *LiveKit, FastAPI, Terraform, AWS, MongoDB Atlas, Python, SIP* **10xR**

- Launched a production-grade **multi-agent AI system** with real-time SIP–WebRTC communication for HIPAA-compliant healthcare workflows, running on **Terraform/ECS** infrastructure (6+ microservices) at **99.9%** uptime, sub-500ms latency, and **40%** cost reduction.

Hybrid Library Management System for Rural Connectivity | *MERN stack* | **GitHub**

- Designed a **MERN stack** dual-database system with predictive analytics, cutting loss by 80% for 1,000+ rural users.

SKILLS

Technologies & Coursework: Python, Multi-Agent Systems (LangGraph, Microsoft Agent Framework), RAG, MCP, FastAPI, Postgress, Docker, MERN stack, STT/TTS, LiveKit, SIP

ACHIEVEMENTS AND EXTRACURRICULAR ACTIVITIES

- Led team to **finalist position** (top 5%) in **JPMC Code for Good 2024**, outperforming 90% of competing teams.
- Selected among **top 25 teams** from 500+ participants for SIH finals with ML healthcare solution.
